

# SAT PREP Curriculum

## MATHEMATICS

### Unit I

## *Course Description*

According to The College Board, the Math test of the redesigned SAT (2016) will assess students' readiness for college and career. Specifically, the Math test will assess the students' fluency with procedural steps, conceptual knowledge, and representational skills. The overarching goal of the New SAT is to ensure that the students are able to analyze real-life problems and use appropriate strategies to solve them.

The SAT Prep course (Math) will cover the Mathematics part during Marking Periods I and III. For ease of understanding and pacing, there will be a total of two units of Math, one in each Marking Period. In this course, students will explore how Mathematics as a tool is used to understand and solve problems in Physical Science, Social Science, Medical Science, History, Business, and Technology. They will be expected to analyze a given scenario, then abstract, develop mathematical models using multiple representations of the quantitative information, and answer related questions. The quality of students' responses to such real-life problems, and therefore their score, will depend to a great extent on their cognitive skills, use of effective mathematical processes, reasoning, critical thinking skills, and thinking time.

Regardless of the entry level of a student into this course, the teacher will teach the units providing enough opportunities for each student to practice problem solving in groups and individually. In addition to daily homework, the teacher will provide study guides, including time management strategies and web links for additional problems after each marking period. A mid-term exam will be administered using problems covered during the first marking period. At the end of the second Marking period, students will have the opportunity to take a full length sample SAT as the final exam for the course.

Assessment results from this course may be used to evaluate a student's quantitative skills for placement into higher level Math courses or as a graduation requirement.

| <b>Pacing Chart</b>      |                            |   |  |
|--------------------------|----------------------------|---|--|
| Unit 1                   | September 1 – September 30 | Number and Quantity                                     | Instruction: 4 weeks                             |
|                          | October 1 – October 30     | Geometry  | Instruction: 4 weeks                             |
| Mid-Term Review and Exam | November 2 – November 13   | Mid-Term Exam on<br>Number and Quantity and<br>Geometry | Remediation/Enrichment and<br>Assessment: 1 week |

## Educational Technology

### Standards

8.1.8.A.5, 8.1.8.A.4, 8.1.8.E.1, 8.2.8.B.1, 8.1.8.D.1

- **Technology Operations and Concepts**
  - Select and use appropriate tools and digital resources to accomplish a variety of tasks and to solve problems.
- **Technology Operations and Concepts**
  - Generate a spreadsheet to calculate, graph, and present information.
- **Research and Information Literacy**
  - Gather and analyze findings using [data collection technology](#) to produce a possible solution for a content-related or real-world problem.
- **Design: Critical Thinking, Problem Solving**
  - Design and create a product that addresses a real-world problem using the design process and working with specific criteria and constraints.
- **Digital Citizenship**
  - Model appropriate online behaviors related to cyber safety, cyber bullying, cyber security, and cyber ethics.

## 21st Century Life & Career Skills

### Standards:

9.1.8.A.1, 9.3.8.B.3, 9.3.8.B.17, 9.3.8.B.12, 9.1.8.A.2

- **Critical Thinking and Problem Solving**
  - Develop strategies to reinforce positive attitudes and productive behaviors that impact critical thinking and problem-solving skills.
- **Career Exploration**
  - Evaluate personal abilities, interests, and motivations and discuss how they might influence job and career selection.
- **Career Exploration**
  - Recognize that an individual's online behavior (e.g., social networking, photo exchanges, video postings) may impact opportunities for employment or advancement.
- **Career Exploration**
  - Explain how personal behavior, dress, attitudes, and other choices can impact the success or failure of a job applicant.
- **Critical Thinking and Problem Solving**
  - Implement problem-solving strategies to solve a problem in school or the community.
- **Critical Thinking and Problem Solving**
  - Relate academic achievement, as represented by high school diplomas, college degrees, and industry credentials, to employability and to potential level of income.

## Differentiated Instruction

### Accommodate Based on Students Individual Needs: Strategies

| <u><b>Time/General</b></u>  | <u><b>Processing</b></u>   | <u><b>Comprehension</b></u>   | <u><b>Recall</b></u>  |
|---|--|---|---|
| <ul style="list-style-type: none"> <li>• Extra time for assigned tasks</li> <li>• Adjust length of assignment</li> <li>• Timeline with due dates for reports and projects</li> <li>• Communication system between home and school</li> <li>• Provide lecture notes/outline</li> </ul> | <ul style="list-style-type: none"> <li>• Extra Response time</li> <li>• Have students verbalize steps</li> <li>• Repeat, clarify or reword directions</li> <li>• Mini-breaks between tasks</li> <li>• Provide a warning for transitions</li> <li>• Partnering</li> </ul> | <ul style="list-style-type: none"> <li>• Precise step-by-step directions</li> <li>• Short manageable tasks</li> <li>• Brief and concrete directions</li> <li>• Provide immediate feedback</li> <li>• Small group instruction</li> <li>• Emphasize multi-sensory learning</li> </ul> | <ul style="list-style-type: none"> <li>• Teacher-made checklist</li> <li>• Use visual graphic organizers</li> <li>• Reference resources to promote independence</li> <li>• Visual and verbal reminders</li> <li>• Graphic organizers</li> </ul> |
| <u><b>Assistive Technology</b></u>  | <u><b>Tests/Quizzes/Grading</b></u>  | <u><b>Behavior/Attention</b></u>  | <u><b>Organization</b></u>  |
| <ul style="list-style-type: none"> <li>• Computer/whiteboard</li> <li>• Tape recorder</li> <li>• Video-Tape</li> </ul>  | <ul style="list-style-type: none"> <li>• Extended time</li> <li>• Study guides</li> <li>• Shortened tests</li> <li>• Read directions aloud</li> </ul>  | <ul style="list-style-type: none"> <li>• Consistent daily structured routine</li> <li>• Simple and clear classroom rules</li> <li>• Frequent feedback</li> </ul>  | <ul style="list-style-type: none"> <li>• Individual daily planner</li> <li>• Display a written agenda</li> <li>• Note-taking assistance</li> <li>• Color code materials</li> </ul>  |

## Enrichment

### Accommodate Based on Students individual Needs: Strategies

- Evaluate Vocabulary
- Learning Centers
- Individual Response Board
- Open-ended activities
- Community/Subject expert mentorships

## Assessments

### *Suggested Formative/Summative Classroom Assessments*

Describe Learning Vertically  
Identify Key Building Blocks  
Make Connections (between and among key building blocks)  
Short/Extended Constructed Response Items  
Multiple-Choice Items (where multiple answer choices may be correct)  
Drag and Drop Items  
Use of Equation Editor  
Quizzes  
Journal Entries/Reflections/Quick-Writes  
Accountable talk  
Projects  
Portfolio  
Observation  
Graphic Organizers/ Concept Mapping  
Presentations  
Role Playing  
Teacher-Student and Student-Student Conferencing  
Homework

## Interdisciplinary Connections

### **Students will be expected to:**

- Explore interdisciplinary contexts and solve a variety of real-life problems from Physical Sciences, Social Sciences, Medical Sciences, Business, and Technology.
- Recognize the underlying mathematical concepts while analyzing different contextual information.
- Make connections between concepts.
- Communicate mathematically while discussing scenarios from various disciplines.
- Demonstrate their computational and procedural skills while providing explanations and interpretations of solutions to problems from various disciplines.

The following examples from The College Board (<https://collegereadiness.collegeboard.org/sample-questions/math/calculator-permitted/1>) indicate a wide range of real-life scenarios students may expect to see on the redesigned SAT (2016).

**Example 1: Question Difficulty: EASY**

**Objective:** Students must identify the correct mathematical notation for an inequality to represent a real-world situation.

The recommended daily calcium intake for a 20-year-old is 1,000 milligrams (mg). One cup of milk contains 299 mg of calcium and one cup of juice contains 261 mg of calcium. Which of the following inequalities represents the possible number of cups of milk  $m$  and cups of juice  $j$  a 20-year-old could drink in a day to meet or exceed the recommended daily calcium intake from these drinks alone? **Answer: A**

**Select an Answer**

- A.  $299m + 261j \geq 1000$
- B.  $299m + 261j > 1000$
- C.  $299/m + 261/j \geq 1000$
- D.  $299/m + 261/j \geq 1000$

**Example 2: Question Difficulty: MEDIUM**

**Objective:** Students must construct a linear equation to represent a real-world situation.

When a scientist dives in salt water to a depth of 9 feet below the surface, the pressure due to the atmosphere and surrounding water is 18.7 pounds per square inch. As the scientist descends, the pressure increases linearly. At a depth of 14 feet, the pressure is 20.9 pounds per square inch. If the pressure increases at a constant rate as the scientist's depth below the surface increases, which of the following linear models best describes the pressure  $p$  in pounds per square inch at a depth of  $d$  feet below the surface? **Answer: B**

**Select an Answer**

A)  $p = 0.44d + 0.77$

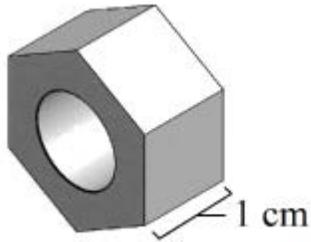

B)  $p = 0.44d + 14.74$

C)  $p = 2.2d - 1.1$

D)  $p = 2.2d - 9.9$

**Example 3: Question Difficulty: MEDIUM**

**Objective:** Students must make connections between physical concepts such as mass and density and essential geometric ideas such as the Pythagorean Theorem and volume formulas.

The figure above shows a metal hex nut with two regular hexagonal faces and a thickness of 1 cm. The length of each side of a hexagonal face is 2 cm. A hole with a diameter of 2 cm is drilled through the nut. The density of the metal is 7.9 grams per cubic cm. What is the mass of this nut, to the nearest gram? (Density is mass divided by volume.)

**Answer: 57 grams**

## RUBRICS

### The Redesigned SAT (2016) Scoring Guidelines and Rubrics

According to The College Board (<https://www.collegeboard.org/delivering-opportunity/sat/higher-ed/scores>), the redesigned SAT will have a scale score of 400 points to 1600 points equally distributed over two main sections, (1) Evidence-Based Reading and Writing and (2) Mathematics.

**NOTE:** Every correct response will receive a credit, but there will be no deductions for wrong or blank responses.

The Math part will have a total of 57 problems with the following break-up.

| Section | Number of Questions | Time Allowed | Calculator Allowed |
|---------|---------------------|--------------|--------------------|
| 1       | 37                  | 55 minutes   | YES                |
| 2       | 20                  | 25 minutes   | NO                 |
| Total   | 57 Questions        | 80 minutes   |                    |

## RUBRICS

| Type of Question          | Number of Questions | Points Worth | Total Points     |
|---------------------------|---------------------|--------------|------------------|
| Multiple-Choice           | 45                  | 1 point      | 45               |
| Grid-in                   | 11                  | 1 point      | 11               |
| Grid-in-Extended Response | 1                   | 4 points     | 4                |
| <b>Total</b>              | <b>57 Questions</b> |              | <b>60 points</b> |
